JD SUMMARY

Required Skills:

- Java
- Python
- C++
- JavaScript
- AWS
- Azure
- GCP
- Git
- SQL
- NoSQL
- Bachelor's degree in Computer Science, Engineering, or a related technical field
- 2+ years of hands-on software development experience

Preferred Skills:

- Cloud platforms
- Version control
- Modern database systems
- Agile/Scrum environment
- Strong analytical skills
- Excellent written and verbal communication skills

GAP ANALYSIS

Java [HIGH]

Add if you have this experience

✓ Safe to add if you have this experience

C++ [HIGH]

Add if you have this experience

✓ Safe to add if you have this experience

Azure [HIGH]

Add if you have this experience

✓ Safe to add if you have this experience

NoSQL [HIGH]

Add if you have this experience

✓ Safe to add if you have this experience

Bachelor's degree in Computer Science, Engineering, or a related technical field [HIGH]

Leave out if not true

2+ years of hands-on software development experience [HIGH]

Leave out if not true

Cloud platforms [MEDIUM]

Mention in skills section if familiar

✓ Safe to add if you have this experience

Version control [MEDIUM]

Mention in skills section if familiar

✓ Safe to add if you have this experience

Modern database systems [MEDIUM]

Mention in skills section if familiar

✓ Safe to add if you have this experience

Agile/Scrum environment [MEDIUM]

Prepare to address this in interview

Strong analytical skills [MEDIUM]

Prepare to address this in interview

Excellent written and verbal communication skills [LOW]

EXPERIENCE CHANGES

AI-BASED AGRICULTURAL MONITORING APP, REMOTE

Full-stack Software Engineer

Original: Build and iterate on AI-driven tutoring features within a practice-first agricultural monitoring application, increasing data processing efficiency by 35%.

Tailored: Build and iterate on AI-driven tutoring features within a practice-first agricultural monitoring application, increasing data processing efficiency by 35%.

Why: Rewrite failed — using original

Original: Design scalable backend architecture using Node.js and Python to process complex environmental data sets for real-time user feedback.

Tailored: Design scalable backend architecture using Node.js and Python to process complex environmental data sets for real-time user feedback.

Why: Rewrite failed — using original

Original: Collaborate on user-facing product delivery to enhance the interaction between AI models and end-users, improving retention by 20%.

Tailored: Collaborate on user-facing product delivery to enhance the interaction between AI models and end-users, improving retention by 20%.

Why: Rewrite failed — using original

Original: Troubleshoot deployment pipelines on AWS to ensure high availability of learning resources and monitoring dashboards.

Tailored: Troubleshoot deployment pipelines on AWS to ensure high availability of learning resources and monitoring dashboards.

Why: Rewrite failed — using original

CREATIVE WEB EXPERIENCES, REMOTE

Frontend Engineer

Original: Designed interactive UI components using React and Next.js to facilitate developer skill development through engaging visual experiences.

Tailored: Designed interactive UI components using React and Next.js to facilitate developer skill development through engaging visual experiences.

Why: Rewrite failed — using original

Original: Iterated on creative web experiences that prioritized practice-first learning and optimized performance for 15+ interactive modules.

Tailored: Iterated on creative web experiences that prioritized practice-first learning and optimized performance for 15+ interactive modules.

Why: Rewrite failed — using original

Original: Built responsive frontend architectures to bridge the gap between engineering execution and user experience across multiple device types.

Tailored: Built responsive frontend architectures to bridge the gap between engineering execution and user experience across multiple device types.

Why: Rewrite failed — using original

Original: Collaborated with cross-functional goals to scale product areas by implementing reusable component libraries.

Tailored: Collaborated with cross-functional goals to scale product areas by implementing reusable component libraries.

Why: Rewrite failed — using original

FULL ORIGINAL RESUME

Summary: Dynamic Software Engineer with 2+ years of experience in Full-stack Development, specializing in React, Node.js, and TypeScript. Proven ability to build and iterate on scalable EdTech solutions and AI-driven tutoring features. Dedicated to bridging the gap between engineering execution and user-facing product delivery through practice-first learning experiences and interactive UI development.

AI-BASED AGRICULTURAL MONITORING APP, REMOTE

- Build and iterate on AI-driven tutoring features within a practice-first agricultural monitoring application, increasing data processing efficiency by 35%.
- Design scalable backend architecture using Node.js and Python to process complex environmental data sets for real-time user feedback.
- Collaborate on user-facing product delivery to enhance the interaction between AI models and end-users, improving retention by 20%.
- Troubleshoot deployment pipelines on AWS to ensure high availability of learning resources and monitoring dashboards.

CREATIVE WEB EXPERIENCES, REMOTE

- Designed interactive UI components using React and Next.js to facilitate developer skill development through engaging visual experiences.
- Iterated on creative web experiences that prioritized practice-first learning and optimized performance for 15+ interactive modules.
- Built responsive frontend architectures to bridge the gap between engineering execution and user experience across multiple device types.
- Collaborated with cross-functional goals to scale product areas by implementing reusable component libraries.
